

## MAGIC LANTERN

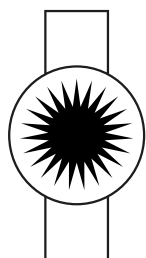

This is a paper toy that we created together with KOTOK Play-things project, and we want to assemble it together with you. Let this lantern illuminate the way in the dark, become an occasion to spend time with your family or just attract your mind and hands. Whatever it becomes, with the lantern the evening will definitely become a little lighter.

→ Cut out the shape along the bottom dashed line and cut it into two parts: a black "handle" stripe and a colored "lantern". Fold the shape along the horizontal dashed lines and cut along the vertical ones according to the scheme (1). Roll the colored part into a cylinder along the horizontal axis and glue it in the places marked with crosses. Glue the black "handle" stripe symmetrically to the top of the colored cylinder to make a paper lantern as shown in scheme (2). Enjoy!

# THE LANTERN OF HOPE

→ Cut out the shape along the outer contour, fold it along the white dashed lines and glue it with white tabs to make a lantern as in the scheme (1). Count the number of rays of the yellow star. Enjoy!

scheme (1)
